2 Narrative Summary and Analysis

During the reporting period from 2024-12-27 to 2025-12-26, 1024 cases were received. Of these, 1023 were classified as serious and 1 as non-serious. The most frequently reported Preferred Terms were Acute kidney injury: 81; Drug ineffective: 60; Hypotension: 48. Reported reaction outcomes were recovered_resolved: 1347; unknown: 1135; not_recovered_not_resolved_ongoing: 569; recovering_resolving: 420; fatal: 137; recovered_resolved_with_sequelae: 34. The supplied expedited criterion identified 1023 alert cases. These are descriptive observations based on the supplied data.

5 Serious Cases / 15-Day Alerts

The supplied expedited criterion identified 1023 alert cases. Alert-case seriousness distribution was serious: 1023; not_serious: 0. 68 alert cases had at least one recorded fatal reaction outcome. The most frequent alert Preferred Terms were Acute kidney injury: 81; Drug ineffective: 59; Hypotension: 48; Drug interaction: 45; Dizziness: 40; Bradycardia: 39; Dyspnoea: 39; Fatigue: 35; Off label use: 34; Diarrhoea: 33; Fall: 32; Condition aggravated: 30; Asthenia: 28; Medication error: 27; Hypokalaemia: 27; Hyponatraemia: 25; Confusional state: 24; Arthralgia: 24; Syncope: 23; Toxicity to various agents: 23. Alert reaction outcomes were recovered_resolved: 1347; unknown: 1132; not_recovered_not_resolved_ongoing: 569; recovering_resolving: 420; fatal: 137; recovered_resolved_with_sequelaes: 34. Alert occurrence countries were eu: 325; united_kingdom: 278; france: 187; canada: 55; italy: 52; germany: 39; spain: 26; poland: 21; portugal: 9; missing: 7; belgium: 4; ie: 3; united_states: 3; ro: 2; sweden: 2; sa: 2; hr: 2; ua: 2; fi: 1; australia: 1; indonesia: 1; china: 1. 9 Data Limitations

No System Organ Class field is available; SOC analysis is not performed. No product label/CCDS is supplied; expectedness cannot be determined. No history-of-actions data is supplied. Source-row count differs from unique case count; case metrics use unique safetyreportid values and reaction metrics retain supplied reaction instances. Individual seriousness flags are independent fields and are not mutually exclusive.

9.1 Analysis Methodology Limitations

- Case-level metrics use one reproducible representative row per safetyreportid; validation warns when case-level values conflict across rows.
- Reaction and outcome cells can be comma-delimited. They are split only to count supplied instances; no reaction rows or instances are deduplicated.
- No System Organ Class analysis is performed because no SOC field is supplied.
- Expectedness is not assessed because no product label or CCDS is supplied.
- Observed trends are numerical descriptions, not safety-signal conclusions.
